

TeleTrust

Welcome to TeleTrust

TeleTrust - IT Security Association Germany was founded in 1989 to provide a reliable framework for deployment of trustworthy information and communication technology.

Today, TeleTrust is a widespread competence network for IT security currently representing more than 130 members from industry, science and public institutions, with associated member organizations in Germany and other countries. In various TeleTrust working groups ICT security experts, users and interested parties meet each other in frequent workshops, round-tables and expert talks. The activities focus on reliable and trustworthy solutions complying with international standards, laws and statutory requirements.

TeleTrust is keen to promote the acceptance of solutions supporting identification, authentication and signature schemes in electronic business and its processes. TeleTrust facilitates information and knowledge exchange between vendors, users and authorities. TeleTrust aims on standard compliant solutions in interoperable schemes. TeleTrust comments on political and legal issues related to IT security, organizes events and participates in conferences.

TeleTrust is carrier of the "European Bridge CA" (provision of public key certificates for secure e-mail communication) and runs the IT expert certification program "TeleTrust Information Security Professional (T.I.S.P.)". Keeping in mind the raising importance of the European IT security market, TeleTrust seeks co-operation with European and international organizations and authorities with similar objectives.

TeleTrust supports national and international conference activities such as RSA, ISSE, Biometrics, D-A-CH Security.

TeleTrust is member of the European Telecommunications Standards Institute (ETSI).

The association is headquartered in Berlin, Germany.

We enable members to share experiences and best practice by holding meetings and conferences, by facilitating working groups who produce reports on topical subjects and by helping members to connect with the right person to help solve business issues or develop beneficial business relationships.

TeleTrusT works with its national and international members, governmental bodies, standards organisations and interoperability initiatives. TeleTrusT's remit is to educate and inform on the latest developments, at the same time enabling its Members to compare their views.

The work produced by the association with its Members (projects, papers, working group meetings, tutorials, reports etc.) is funded by both membership subscriptions and revenue generated through fee-paying events.

Membership advantages

- Opportunities to network with diverse members and non-members
- Company information listing on the TeleTrusT web site
