

EU Projekte zum Thema TRUST:

uTRUSTit—Usable Trust in the Internet of Things

http://www.utrustit.eu/project_summary/

<http://de.slideshare.net/mobile/uTRUSTit/ustrustitusable-trust-in-the-internet-of-things>

The uTRUSTit project supports user trust perception related to the IoT by guaranteeing transparency of underlying security and reliability properties of the interconnected systems, thus enabling the user to make informed decisions on security and privacy.

During its three years lifetime the uTRUSTit project will deliver numerous official reports (deliverables) to the European Commission.

[List of public deliverables.](#)

In addition, uTRUSTit partners focus on contributing to research by means of articles in journals, books or conference proceedings. You can find these project results also in this section as well as talks and presentations given by uTRUSTit partners at conferences or on other occasions.
