The screenshot shows a web browser window with the address bar displaying <https://ec.europa.eu/cefdigital/wiki/pages/viewpage.action?pageId=48762259>. The browser's address bar also shows "Sicher" and "Opinion No. 1/2017 - eID". The page title is "Opinion". The main content area contains the following text:

Based on the examination of the pre-notification documents provided by the Federal Republic of Germany and the findings of the Peer Review Report, the Cooperation Network is of the opinion that the pre-notification documents and additional information provided by the Federal Republic of Germany demonstrate sufficiently how the German eID scheme to be notified meets the requirements of Article 7, Articles 8(1)-(2) for assurance level "high" and 12(1) of the eIDAS Regulation and Commission Implementing Regulation (EU) 2015/1502.

Opinion

Based on the examination of the pre-notification documents provided by the Federal Republic of Germany and the findings of the Peer Review Report, the Cooperation Network is of the opinion that the pre-notification documents and additional information provided by the Federal Republic of Germany demonstrate sufficiently how the German eID scheme to be notified meets the requirements of Article 7, Articles 8(1)-(2) for assurance level "high" and 12(1) of the eIDAS Regulation and Commission Implementing Regulation (EU) 2015/1502.

According to Article 4(6) of the Rules of Procedure the Cooperation Network agrees to publish this opinion.

Note: The architectural approach and the protocol flows have been developed in a joint approach by LuxTrust S.A. (Luxembourg) and ecsec GmbH (Germany) based on the "eID-Client" specification (BSI TR-03124) of the German Federal Office for Information Security and related standards. Provided that any specification that uses this flows and architectural approach preserves the present note explicitly and transparently in its content, LuxTrust S.A. permits free use of the concept without any limitation in the public domain by at the same time reserving its right to freely continue using the concepts and specs and its own implementations thereof without any limitation and at its own discretion.
